

Displaying the List of Users

By: Mosh Hamedani

Common Issues

1- I get the error: Unexpected token <.

You have forgotten to include the http script on index.html, after angular script.

```
<script src="node_modules/angular2/bundles/http.dev.js">
</script>
```

2- I get the error: No provider for Http!

You haven't imported http providers in boot.ts.

```
import {HTTP_PROVIDERS} from 'angular2/http';

bootstrap(AppComponent, [ROUTER_PROVIDERS, HTTP_PROVIDERS]);
```

3- I get the error: No provider for UserService!

You haven't registered UserService as a provider in UsersComponent. Remember, we need to do this so the injector behind this component can create an instance of UserService and pass it to UsersComponent in its constructor; otherwise, it doesn't know how to create an instance of UserService (and all its dependencies).

```
providers: [UserService]
```

4- I get the error: Cannot resolve all parameters for UserService.

You forgot to decorate UserService with @Injectable().

```
@Injectable()  
export class UserService {  
}
```
